2.84.0

Upcoming Change Details		
Version	2.84.0	
Change Type	☐ *Breaking change* ☑ *Bug Fix* ☐ *New Feature* ☑ *Enhancement*	
Change Details	*Fixes*	• Fix the display of latitude and longitude coordinates in the tooltip when clicking the order marker on the map in the Schedule page • The map view should not zoom out or move when clicking the order marker on the map in the Schedule page • Orders created using the bulk upload functionality that do not have constraints should be labelled as "Service" • Instead of displaying the ID, the depot name should now be shown for shift patterns created using the bulk upload functionality for shifts • Enhanced location requests to prevent user lockouts from the Control Room UI • Ensure that the priority points are assigned correctly when grouping orders at the same location
	Features	-
	Enhancements	• Improve the orders optimisation process for far-ahead schedules • Ensure that the source and target trips are different when moving activities on the Schedule page

		• Display the values rounded to two decimal points for constraints in the metrics section of the Schedule page
		• Enhancing performance when creating multiple shift pattern exceptions
